

PROJECT MANAGEMENT

BCS is an invaluable tool for efficient project management. It provides for the capture of extensive project data, which in turn allows staff to easily produce the correct documentation, track communications and generate insightful reporting.

BCS is designed to assist clients from the initial consultation stage all the way through to project completion and thereafter. With the system being cloud-based, project information is instantly retrievable for an easy and collaborative working approach.

FEATURES

- Drag and drop documents and emails into relevant categories and projects
- Record project site address details
- Create and manage sub-projects and related financial data
- Streamline data entry using predefined contact lists
- Assign different types of projects configured to suit your business
- Prevent incorrect document use by setting up default categories with project types
- Convert quote documents into projects with one click, eliminating double data entry
- Run reports on project status, based on the nominated project manager or administrator for each project
- Access to management reporting
- Manage risk using tailored project checklists to highlight and communicate non-compliant items with clients
- Combine sets of documents from a project into a single document and eliminate the need for excessive email attachments

Experience better business process & seamless compliance with BCS
